Advanced Dimensional Measuring Gauges

- Design and manufacturing of dimensional multi-gauge systems
- Design of control fixtures
- GD&T computations based on BS, DIN and ASME standards
- Special gauges for steel industries
- Provide software package for Statistical Process Control (SPC)
- Performing Measurement System Analysis (MSA)

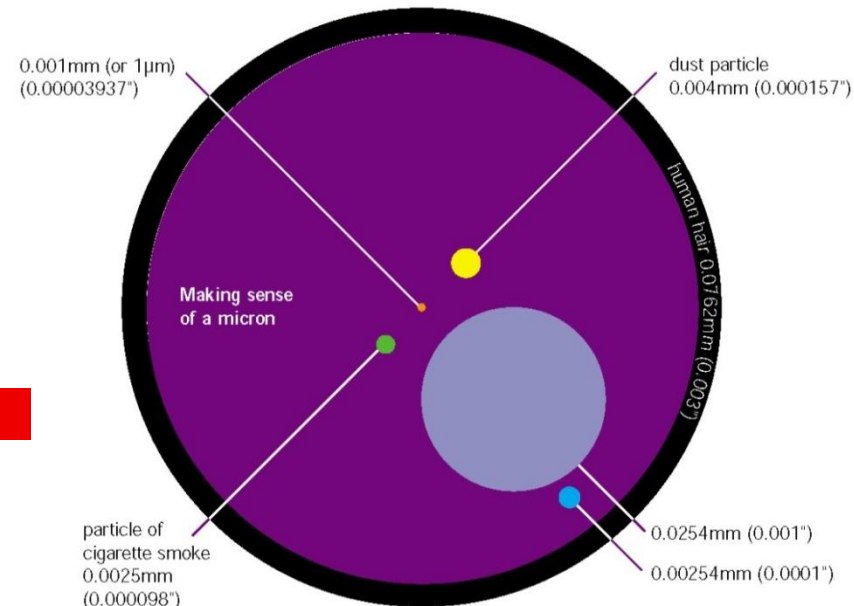

LVDT Probes and Transducers

- 0.001mm & 0.0001mm LVDT probes
- Different probes for different applications
- Using analog and digital probes in electronic gauges
- Orbit network for connecting probes and other devices to each other
- Development softwares for probe applications

A hundred times thinner than human hair!!

Redesign and Upgrade the used measuring machines

- Analyzing the functions of used measuring machines and offering an efficient alternative system by which all necessary machine functions can be implemented.
- Upgrading the hardware and software of machine so that it satisfies the customer requirements.
- Replacing of all useless parts with new parts.
- Re-designing the fixture of measuring machine

Digital Readouts

- Various kinds of digital readouts for LVDT applications
- Integrated both measurement and control
- Digital inputs/outputs
- Touch screen color display in different sizes
- Programmable based on customer requirements
